Applicant's election without traverse of the invention of species II in the paper filed 11/4/02 is acknowledged. Claims 1-6 are seen to read on the elected species because they are generic to all species. Claim 7 is drawn to species IV because the limitations of grinding the back surface and forming grooves on the ground surface are included.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Inoue et al.

Inoue et al discloses forming through hole 3a in resin layer 3 by first cutting using a laser followed by forming solder bumps 9 in the holes 3a and second cutting to separate individual devices (figures 1-8 and accompanying text).

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
